HOW TO USE GUNDAM ASSEMBLE COLOR

Prepare the palette and water!

◀▲You only need water and palette to use these colors. With "Mr. WET PALETTE", you can keep the paint in good condition during long painting sessions. Use water to thin the paint or to wash the brushes.

Mix the paint well!

▲Before painting, use a stick to mix the paint well from bottom. Proper mixing lets the paint perform as it should.

Thin little with water

▲Moisten the tip of the brush with a tiny amount of water to thin the paint. Be careful not to add too much water, or the paint will become too watery and won't adhere properly.

Do not apply the paint directly to the parts.

▲A brush holds more paint than you think. Wipe the excess paint off the tip on a paper towel or palette to control the amount of paint in the brush.

Apply several thin coats

▲To paint the part, spread on a thin coat, let it dry completely, then apply another coat again. Building up multiple thin layers gives a beautiful finish.

Learn how to "Dry-brush" for more striking finish!

Spray black primer

▲Let us introduce "Dry-brush" technique that gives your miniature a dimensional finish even on your first paint job. Start by applying a black spray primer, such as "AQUEOUS SURFACER BLACK". A black basecoat creates a sense of weight and serves as natural shadow in recessed areas.

Wipe the paint off the brush

▲Let's use ZAKU miniature as an example. First, load "NGA09 GREEN" to dried brush, then wipe it off with a paper towel until almost no color comes off. The key to dry brushing is to slowly apply the tiny amount of paint left in the brush.

Rub the part with the tip of the brush

▲Rub the part with the tip of the brush while avoiding area where we want to leave the black basecoat such as the bazooka, chest, and knees. With each stroke, the green pigment will be caught on the raised area and show the ZAKU's sculpt. This is "Dry-brush" technique.

Layer lighter green

▲Next, dry brush with "NGA08 LIGHT GREEN". You can create natural gradients and sense of depth by layering color while leaving the darker green below.

Use SHADE COLOR to tighten the paint job

▲Lastly, spread "NGA202 SHADE BROWN" over the entire model. This will blend the green tones and add a weathered look. Be careful not to put the paint too much in the details and use the tip of the brush to pick up any excess paint.

▲Painting is done! You can always correct any areas where the paint has gone over afterwards with a fine brush. Just by rubbing on and layering color with a brush, you can create an imposing ZAKU
